# HOSPITAL EMERGENCY ROOM DASHBOARD

## Key Take Aways

### HOSPITAL EMERGENCY ROOM DASHBOARD

#### Patient ID:

A unique alphanumeric code assigned to each patient. This serves as the primary identifier to distinguish one patient's records from another. It's essential for tracking individual cases while ensuring privacy in data analysis.

#### Patient Admission Date:

The specific date and potentially time the patient was admitted to the emergency room. This field helps analyze patterns such as peak admission times, seasonal trends, or emergency response rates.

#### Patient First Initial:

The first letter of the patient's first name, often used for anonymization purposes in datasets to comply with privacy regulations like HIPAA or GDPR.

#### Patient Last Name:

The last name of the patient. If anonymized, this field could still be useful for identifying trends or grouping by familial or cultural naming conventions.

#### Patient Gender:

The gender identity of the patient, typically recorded as Male, Female, or Other/Nonbinary. Useful for demographic studies and understanding healthcare disparities among different genders.
